

DYMO Software Application v5.0.5 for Mac (NOT running OS X)

Platform

Mac OS 8.6 up through version 9.x

- **Note:** Mac OS versions 8.5 and earlier are no longer supported

Features

Includes Add-In for MS Word 98 and 2000

Summary of Changes

- Resolved "small printing" from within some 3rd party applications such as FileMaker Pro and Simple Text
- Corrected "Orientation Setting" problems with some 3rd party applications
- Fix for issue where some EL40 and EL60 LabelWriters had connectivity problems and did not display Printer Name in the Chooser
- Resolved outstanding issue where "Page Setup" settings were not being saved from one print job to the next
- In cases where 3rd party applications will not print when low on memory, a dialog box is now displayed to the user suggesting that they increase memory allocation.

System Requirements

- 15 MB of hard disk space
- 8 MB of available RAM
- Open Serial or USB port
- CD ROM or Internet connectivity

Installation Instructions

1. Download the DLS version 5.0.5 software to your desktop
2. Double-click on the **DLS505Mac** folder
3. Double-click on **DYMO Label Software Installer**
4. Select **Easy Install** and follow the on-screen instructions

Special Instructions and Important Notes

- This application will only upgrade DYMO Label Software (DLS) from version 4.x and newer
- Use the following directions to import database files from DLS 4 into DLS 5:
 1. Open the DYMO software and **Export** your list to your desktop
 2. Using **Sherlock**, do a search for all references to **DYMO LabelWriter** and **Uconnect** and **Delete** these files.
 3. Download the DLS 5.x software
 4. Make sure your LabelWriter is in direct connection with your Mac
 5. Install DLS 5.x
 6. Restart your system
 7. Launch the new DLS 5.x
 8. Open the **List Manager** and **Import** your saved data
